

LOCAL COMPANY BRINGS 21st CENTUARY POLLUTION PREVENTION TO IRELAND.

Marking it's twenty fifth year in business local company Precision Industrial Services have secured the sole right to distribute, manage and install the award winning Hawkeye pollution prevention system, to the Irish market.

This remarkable system monitors potentially environmentally harmful spills in sensitive areas, utilising mobile phone technology and web-based communications.

The system has many applications from sewerage network management to flood prevention and protection of sensitive habitats.

Within seconds of detecting a spill/flood about to occur the system sends a message to authorities mobilising crews to prevent pollution incidents.

Originally developed for monitoring combined storm overflows for Yorkshire Water the system has won many international environmental awards and is revolutionising how sewerage systems, storage facilities and public road drainage networks are managed improving responses to incidents and ultimately preventing the contamination of habitats and flooding of homes.

The system is also becoming widely used on the English motorway networks giving advanced warning to local authorities of potential road flooding preventing high speed water skid incidents.

The main advantages of this system to Northern and Southern Ireland is that it is capable of being fitted to older existing infrastructure and is self powered making it very versatile and affordable.

The system can also be used to identify and gather evidence remotely of illegal discharges to sewerage systems.

Again the remote system senses an illegal substance in the water and retrieves a sample then sends a message to authorities informing them to retrieve the sample for analysis.

The time and volume of the discharge is recorded and sent over the mobile network along with the global position location.

Precision spokesperson Alan Stringer said, “ With greater daily emphasis on the protection of the environment, Precision have spent two years identifying technology driven solutions to environmental problems and Hawkeye, is by far the most exciting pollution prevention technology available world wide.”

“Precision are no strangers to providing leading technology services with three international partnerships to date we continue to grow our Property, Environmental and Utility divisions providing diverse services such as underground utility mapping using ground penetrating radar which again is another first for Ireland.”

“With support from world leading technology partners Precision looks forward to the next twenty five years of business across Ireland and beyond.”
