

Health & Social Services Estate (Tank Clean)

Precision were recently engaged by the health and social services board to clean over 40 fuel tanks.

The project required tank emptying, de-sludging cleaning, bund condition reporting and waste disposal.

The health and safety requirements were extremely stringent and as hospital business needed to continue while the work activity was in progress, this presented unique challenges to the Precision project team

A full survey was conducted and a risk assessment and method statement was agreed with the various estates managers, every estate presented different problems and meant a very detailed plan had to be drawn up for the complete project.

The project was completed to time and cost with no incidents.

The estates were extremely pleased with the project outcome and Mr Miles Smith, Senior Estates Manager complemented Precision on the project he called it "A Major Success"
